Rachid Awidah

Junior Full Stack Developer

Rachidawidah1@gmail.com | Portfolio | GitHub | LinkedIn

PROFILE

Computer Engineering graduate from the University of Aleppo with hands-on experience building full-stack applications. Developed a retail point-of-sale system as a personal project and co-developed a school quality analytics platform in a two-person graduation team.

TECHNICAL SKILLS

Frontend: Angular, TypeScript, HTML, CSS, JavaScript

Backend: Laravel, PHP, Python, FastAPI, REST APIs

Database and tools: MySQL, Docker, Git, GitHub

PROJECTS

POS & Business Management System

Personal project | Angular, Laravel, PHP, MySQL, Docker | Source code

Built a full-stack point-of-sale application that connects barcode-based checkout and sales returns with inventory tracking and purchasing.

Implemented role-based permissions, cash shift management, and sales and profit reporting. Configured the application to run locally with Docker.

Intelligent School Quality Analytics Platform

Graduation project | Angular, Python, FastAPI, PCA, K-means

Co-developed the platform in a two-person team, sharing work across the frontend, backend, and data analysis.

Built a workflow for cleaning school data, reducing dimensionality with PCA, and grouping schools with K-means. Validated the scoring system on data from 882 schools, using a composite score built from 20 indicators.
